Project Charter:
Restaurant Application Project

DATE: 16/03/2023

Project manager: Sothing Mark Rk

Project Summary

The Restaurant Application Project aims to create a mobile application that allows customers to order food directly from their table using their mobile devices. The application will provide a more efficient and convenient ordering process for customers, as well as improve order accuracy and streamline the order fulfillment process for restaurant owners.

Project Goals

The objectives of the Restaurant Application Project are as follows:
- Develop a mobile application that allows customers to order food directly from their table using their mobile devices
- Provide an efficient and convenient ordering process for customers
- Improve order accuracy and streamline the order fulfillment process for restaurant owners
- Increase revenue for participating restaurants
- Improve customer satisfaction and loyalty for participating restaurants

Deliverables

- The project will be considered complete when the following deliverables have been successfully completed:
- A fully functional mobile application that allows customers to order food directly from their table using their mobile devices
- Integration with restaurant ordering systems to enable real-time order fulfillment
- User documentation and training materials for restaurant staff

- Marketing materials to promote the application to customers

Scope and Exclusion

The project timeline is as follows:
- Project Start Date: march
- Requirements Gathering and Analysis: April
- Design and Development: may
- Testing and Quality Assurance: June
- Deployment and User Training: July
- Project End Date: August

Benefits & Costs

The project budget is estimated at million dollar. This budget will cover the costs associated with the development, testing, deployment, and marketing of the application.
